

EcoInsight displays the environmental efforts of today and tomorrow

Sustainable development in Sweden

Gotland – a sustainable community in the middle of the Baltic Sea

In the middle of the Baltic Sea lies Sweden's biggest island, Gotland. A limestone island with forests, meadows and beaches and a mild climate where roses and orchids flourish. An historic island whose Visby the medieval World Heritage city is encircled by a city wall. A rich agricultural landscape, interesting geology and hospitable people add to the special milieu on Gotland.

A multitude of bird life, luxuriously rich plant life and exciting geology all make up an excellent ecological platform. These unique natural and cultural qualities make up good pre-conditions for Gotland becoming a model sustainable community.

The island's unique qualities result in high goals – within a generation, in 2025, Gotland is to be a sustainable community.

The island's unique qualities result in high goals – within a generation, in 2025, Gotland is to be a sustainable community.

Join EcoInsight on organised study tours to Gotland to participate on the spot in successful, visionary environmental work. You will be professionally attended to in unique, stimulating surroundings where your study visit is characterised by an exchange of environmental knowledge and experience combined with culture, scenery and ecological culinary happenings.

Contact

Send an email with your efforts and we make a proposal for you. We also recommend a stay at Hotell S:t Clemens, the first and only ecolabelled hotel on Gotland.
